Records of the Coalition on West Valley Nuclear Wastes
Creator: Coalition on West Valley Nuclear Wastes

Collection No.: MSS 43
Extent: [36 carton, 3 flat, and 93 manuscript boxes, 72.35 cubic ft]
Processed By: Carolyn Klotzbach, Jeromy Kraft, Sarah Marchitelli, Scott Richmond, and Kuniko Simon.
Finding Aid Written By: Kuniko Simon, January-June 2010
Inclusive Dates: 1956-2008

Abstract: The Records of the Coalition on West Valley Nuclear Wastes documents activities of the Coalition while monitoring the operations of the West Valley Nuclear Waste site in Western New York, including government and corporate documents that the Coalition collected.

Term of Access and Use: The Records of the Coalition on West Valley Nuclear Wastes are open for research. However, some files are restricted and their copyrights belong to other parties than the creators. Consult archivist for details.

Citation Information: [Item information and date], Box #, Folder #, MSS 43, Records of the Coalition on West Valley Nuclear Wastes, SUNY Fredonia Archives and Special Collections.

Contributors: Coalition on West Valley Nuclear Wastes, Mino Fried, Joanne Hameister, Carol Mongerson, Raymond C. Vaughan, Seth Wochensky, and Emil Zimmerman.

Acquisition Information: Initial acquisition made in January, 2008. Further accruals are expected every five years.

About the Coalition on West Valley Nuclear Wastes:
The Coalition on West Valley Nuclear Wastes (CWVN) was formed to study the reprocessing operation of the nuclear waste dumping site at West Valley, New York in 1974. Their group motto is that everyday citizens can learn, communicate, and participate effectively in the matters of the WVNW site. The Coalition itself neither requires membership nor has sought incorporated status under section 402 of the not-for-profit corporation law. The great majority of its members reside in Erie and Cattaraugus counties.

CWVN has been fighting to have the dumping site stabilized and cleaned up and to prevent the addition of new wastes. Volunteers of the Coalition continue to independently study legal, legislative, executive (including federal and state regulations and environmental review procedures), health, environmental, and technical matters on the site by requesting information from legislatures and government agencies, attending
activist conferences and government-sponsored meetings, and exchanging information with professionals in different fields. Some members specialize in technical aspects of the waste solidification project and health effects of radiation.

The West Valley Demonstration Project Act (WVDPA) in 1980 resulted from the Coalition’s efforts. Coalition participants demanded a site clean-up by the federal and state governments, and they won their claims. Since the project started, they have been carefully observing its progress, commenting on government-released annual reports and at DOE-sponsored public quarterly meetings, and spreading general information on the West Valley site and the WWDPA through media and public conferences in order to help maintain the clean-up project’s funding. Their publications include a newsletter, *The Coalition Crier*, and collaboration with Don’t Waste New York in producing *‘Low-Level’ Radioactive Waste: The Siting Process in New York State* (1990; 3rd ed., 1990), and *Geology Reports of the Coalition on West Valley Nuclear Wastes* (1994). The Coalition ran their own radio program between 1980 and 1982.

In 1987, the Coalition initiated a lawsuit against DOE and settled an agreement, a Stipulation of Compromise, requiring DOE to do an Environmental Impact Statement (EIS) on closure and decommissioning of the site. After the lawsuit, they kept monitoring and participating in discussions regarding EIS, mainly through the Department of Energy (DOE), the Environment Protection Agency (EPA), and the Nuclear Regulatory Commission (NRC), but also at the state level with the New York State Energy Research and Development Authority (NYSERDA), NYS Development Authority, Department of Health, and NYS Department of Conservation (NYSDC). In 1996, the Coalition came back to federal court to challenge a violation of the stipulation agreement over long-term maintenance of the high-level tank and erosion predictions when they noticed a draft of EIS hid unacceptably high doses of radiation to the population. After the initial lawsuit, the Coalition came back to District court twice (2006 and 2008) to challenge DOE’s EIS violations.

The Coalition’s monitoring, advocating, lobbying, suing, and acquiring government information on West Valley has met with success over the long term. The Coalition has kept the DOE involved in overseeing the site (it is one of the only DOE branches nationwide to be producing Environmental Impact Statements and Environmental Assessments on a nuclear waste site that has commercial reprocessing facilities), discovered facts and contributed data on their oversight (through quarterly public meetings of the DOE-sponsored Citizen Task Force), and drafted, monitored, supported, and helped implement the West Valley Demonstration Project Act.

Participants of CWVN have included Buffalo Nuke; Center for Health, Environmental & Justice; Citizens’ Environmental Coalition; Don’t Waste New York; For A Clean Tonawanda Site, Inc.; League of Women Voters; Natural Guard, Jamestown, NY; Nuclear Information and Resource People’s Campaign; Alfred, NY, Service; Sierra Club, Buffalo; Radioactive Waste Campaign; Springville Radiation Study Group; Tritiums, Bath New York; and Western New York Peace Center.
Biographical Notes (major contributors to the collection):

Raymond C. Vaughan (b. 1944) has worked on radioactive waste issues as a member of the Coalition since 1978. As a member of the Coalition’s steering committee, he specialized in technical, legal, and regulatory aspects of radioactive waste disposal. He was also a member of Citizen Task Force, Don’t Waste New York, Town of Hamburg Conservation Advisory Board, Buffalo Society of Natural Sciences, Buffalo & Erie County Historical Society, and several organizations that relate to the preservation of Western New York’s natural beauty and cultural heritage. Currently, he is an Environmental Scientist at the New York State Attorney General’s Office.

Carol Mongerson (1927-2005) founded the Springville Radioactive Study Group in 1974 that later became the Coalition. Her primary contribution to the Coalition was interpreting complex nuclear waste issues for the members and explaining them to the general public. As an active participant in state government-sponsored meetings, she energized the Coalition’s activities in the areas of health study, publications, communication between members and workers at the West Valley site, and scrutiny of management. She was an editor of The Coalition Crier and author of the unpublished manuscript Silent Rape (excluded from the collection). She was also the founder of the Springville Art Center, which she established in 1998, where she conducted readings and performances of two of her plays.

Joanne Hameister (b. 1941) started to deal with West Valley site issues when she was a member of the East Aurora League of Women Voters in 1978. A perpetual driving force of the Coalition, she has been an active participant in the areas of technical issues and health and safety. She served on boards of directors for the League of Women Voters at the local, county and state levels. Since 2006, she has been the chairperson of the Coalition’s steering committee.

About the West Valley Nuclear Waste Site (WVNW):

In 1961, New York State acquired land near West Valley (the Town of Ashford) for the West Valley Nuclear Service Center. Sequestration of nuclear wastes began in state-licensed burial grounds at that time. In 1963, the Atomic Energy Commission gave permission to the New York State Atomic Energy Research and Development Authority (NYSAERDA) and Nuclear Regulatory Commission (NRC) to convert the Western New York NSC into a nuclear reprocessing plant for nuclear fuel from commercial reactors’ operations.

Davison Chemical Company established Nuclear Fuel Services (NFS), which received licenses to operate fuel reprocessing in the facilities from NRC and New York State agencies and was a state contractor between 1966 and 1972. The site was closed in 1975 due to infiltration of water into the burial trenches, leakages of radioactive materials into Cattaraugus Creek (which eventually runs into Lake Erie), and various operation problems at the site. No new wastes have come to the site since 1975, but wastes and contaminated equipment and materials remained.
In 1980, the U.S. Congress passed legislation, the West Valley Demonstration Project Act (WVDPA), giving DOE responsibility to solidify the high-level liquid waste and authority to address issues involved in decontaminating and decommissioning the facilities. That project is funded 90% federally and 10% from New York State. When the West Valley Demonstration Project was established in 1980, facilities were built in the North Plateaus to solidify high-level liquid radioactive waste using waste vitrification technology. In 1982, DOE moved on site and chose West Valley Nuclear Services, a Westinghouse subsidiary. The solidification process ended in 2002.

There are two burial grounds at the West Valley site. The State-Licensed Burial Ground (SDA) was opened in 1963 and closed in 1975. Various commercial, defense, and research enterprises’ radioactive wastes were buried in large trenches in the 20-acre burial area. The second burial ground is the NRC-Licensed Disposal Area (NDA), a 5-acre area to take wastes from the reprocessing plant and related facilities from 1966 to 1975. The area had been shut down for decontamination and expansion; however, lower-level WVDP’s cleanup wastes were buried there between 1982 and 1986. Much smaller than the SDA (a total of 239 400 x 600-foot disposal holes compared to 15 acres) it also contains high levels of radioactive waste that NFS received and could not process.

In addition to the site-governance issues, there are two types of radioactive wastes at West Valley, categorized into two levels, Low-Level Radioactive Waste (LLRW) and High-Level Radioactive Waste (HLRW), and each has classes within it that require different agencies’ regulations.

Usually LLRW is defined as either radioactive or contaminated materials generated by contacts with radiation. Dry trash, paper, plastics, glass, clothing, discarded equipment and reactor components, tools, sludges and liquids are type of wastes generated by power reactors, industry, and hospitals and universities. LLRW has three classes, A, B, and C, based on the concentration of long-lived and short-lived radionuclides. The federal and state government share responsibility to deposit and manage high-class LLRWs.

The United States Congress passed the Low-Level Radioactive Waste Policy Act in 1985, which requires states to provide storage for waste generated within their borders. The act also shifted the responsibility of LLRW management to each state. In 1986, the Low-Level Radioactive Waste Management Act was passed by the New York State legislature, banning the use of West Valley as a repository for LLRW from the state. In 1991, the Town Board of Ashford passed a resolution to reopen the LLRW facility at West Valley, which was annulled by the Supreme Court of Cattaraugus County because it failed to comply with the requirements of the State Environmental Quality Review Act (SEQR) and the Low-Level Radioactive Waste Management Act. Still later, a New York State Assembly bill and a U.S. Senate bill were introduced during the 1993 session, there were competing bills proposed to reopen the site, to study its environmental feasibility further, and to consider other sites. Clearly, there are thorny issues associated with the siting of Low Level Nuclear Waste.
High-Level Radioactive Waste comes from nuclear power reactors after their fuel is spent and no longer effective for generating power to produce electricity. Because the nuclear power reactor contains uranium 235, which creates radioactive isotopes of several lighter elements, such as cesium and strontium (fission products), they are highly radioactive and thermally hot, and require special handling and shielding. Between 1966 and 1972, NFS reprocessed nuclear fuel and weapons waste at the West Valley site in order to separate these fission products and other wastes from usable nuclear fuel. However, they usually remain a radioactive hazard for over a thousand years. According to the Nuclear Information and Resource Service, “the regulatory definition of high-level radioactive waste includes only irradiated fuel and the liquid and sludge from reprocessing fuel to recover plutonium (including solids resulting from stabilization of reprocessing wastes). Reprocessing of commercial fuel proved not to be economical or technically feasible in the U.S.” There are three tanks with radioactive liquid waste at the site; they are highly radioactive. Since there is no final destination for these high-level wastes to deposit in this nation, the remains stay at the site, even after those liquids have been reprocessed and vitrified (solidification by mixing molten glass).

**Partial Legal/Legislative Chronology:**

1946 Atomic Energy Act established.

1954 Congress enacted the Atomic Energy Act of 1954, and the Atomic Energy Commission (AEC) began to encourage private industry to participate in reprocessing of irradiated nuclear fuels as part of a program to commercialize the nuclear fuel cycle.

1959 New York State established the Office of Atomic Development that is responsible for coordination of atomic regulatory and development functions within the State.

1962 New York State established the New York Atomic Research and Development Authority.

1969 National Environmental Policy Act (NEPA) passed by Congress.

1970 NEPA enacted.

1970 AEC amended the regulation (10 CFR 50) that HLRW has to be solidified within 5 years and shipped to a federal depository within 10 years after separations.

1974 The Energy Reorganization Act abolished AEC and split control into the Energy Research and Development Administration (now the Department of Energy [DOE]) and the Nuclear Regulatory Commission (NRC). The former focuses on the development and production of nuclear weapons, the promotion of nuclear power, and other energy-related work. The latter focuses on regulatory work (not including the regulation of defense nuclear facilities).
1975 Fish-Hamilton Bill to authorize an independent study of the civil nuclear power functions and special industrial operations of the atomic operations of AEC introduced in the U.S. House of Representatives. Later, it was referred to the related committees.

1976 Nuclear Fuel Services, Inc., decided to abandon reprocessing and leave waste to be managed by New York State.

1979 The Energy and Water Development Appropriations Act (PL 96-69), which directed DOE to provide technical study and support for a solidification program at West Valley, was passed.

1980 U.S. Congress introduced a bill (S.2433) to authorize DOE to conduct a High-Level Nuclear Waste Management demonstration at West Valley. The West Valley Demonstration Act (PL 96-368) is passed; the clean-up project is supported by 90% federal and 10% state funds.

1980 U.S. Congress passed the Low-Level Radioactive Waste Policy Act (LLRWPA), which required states, separately or in compacts, to find disposal sites for nuclear wastes made within their borders.

1982 The Nuclear Waste Policy Act (NWPA) required the federal government to provide a site for the permanent disposal of HLNW, with disposal paid for by the generator.

1985 U.S. Congress amended the LLRWPA, adding milestones and penalties (such as requiring sites to be operational by 1993), since states had been slow to react. At the same time, the NYS Legislature amended the Low-Level Radioactive Waste Management Act (LLRWMA), banning the use of West Valley as the state’s LLRW disposal facility.

1987 The Stipulation of Compromise (the Coalition on West Valley Nuclear Wastes and Sierra Club vs. DOE) was signed to settle a case that would have gone before a U.S. District Court. EIS started.

1987 U.S. Congress amended the NWPA, establishing Yucca Mountain as a possible disposal site to be investigated.

1989 Five additional potential sites in Alleghany and Cortland counties to be investigated.

1990 Investigations indefinitely suspended due to public protests.

1990 NYS legislature passed an amendment to the Low-Level Radioactive Waste Management Act to improve the siting commission’s responsiveness to the public and develop an on-site storage study, with opportunities for public review and comment.

1991 Public Health Law is amended by adding LLRW reduction program in Article 12 of Title IX.
1991 Citizens of Ashford sue Town of Ashford Board for their resolution offering to take LLRW. County Supreme Court Judge upholds suit, annulling the resolution.

1992 Amendment to NYS Environmental Conservation Law and Public Authorities Law to enact LLRWMA.

1994 Bill to amend the NYS Environmental Conservation Law, in relation to interim management of LLRW, introduced in both Senate and Assembly.

1996 New draft of EIS issued, establishing a Citizen Task Force, which was eventually split into a Waste Management EIS and a Closure EIS.

1997 The License Termination rule was adapted by NRC, which allows NYSERDA to hold NRC’s license upon the completion of the West Valley Demonstration Project.

1998 Natural Resources Defense Council (NRDC) vs. DOE for failure to complete EIS on the basis of Order 435.1 that violates the Nuclear Waste Policy Act (42 U.S.C. 10101).

2001 Coalition vs. DOE (lawsuit remains at federal court; at stake are DOE closure issues on 1996 EIS in accordance with National Environmental Policy Act).

2002 DOE announced that the EIS would be rescoped and that residual high-level nuclear waste would stay in underground tanks at the West Valley site.

2006 Another lawsuit, Coalition vs. DOE, for continuing to violate the Stipulation.

2007 West Valley Remediation Act grants federal government complete control over further clean-up at West Valley site; federal congressional (House) hearings held.

The Records of the Coalition on West Valley Nuclear Waste documents Coalition activities while monitoring the operations of the West Valley Nuclear Waste site in Western New York, including government and corporate documents the Coalition collected. The depositories came from Joanne Hameister, Carol Mongerson, and Raymond C. Vaughan. The contributor is noted on the corner of each page as follows: Hameister [JH], Mongerson [CM], and Vaughan [RV]. For most of the collection, the processing archivist kept provenance and original order of each contributor’s records by separating their folders, creating specific series/subseries, and using archivist notes ([ ]). After the folder level description, there is a section entitled “includes,” which does not attempt to describe everything in the folder, but rather highlights some significant items to give a sense of the folder’s contents.

Series I: Government Documents contains government publications and reports (including memoranda and newsletters) and professional research contractors’ reports prepared for governments that were sent to the Coalition or received by the Coalition during meetings, provided that they do not include any annotations by Coalition members. Series II: Corporate Documents are treated in a similar manner; only those
corporate documents without any Coalition comments are separated and housed in this series. Series III: Coalition of West Valley Nuclear Waste contains documents produced by, researched by, commented on, or specifically requested by the Coalition. Hence, responses from agencies to Freedom of Information Act (FOIA) requests by the Coalition are not in Series I; they are stored in Subseries C. Correspondence of Series III (see below). In each series and subseries, archivist notes [ ] indicate separated items.

Meeting- and conference-related correspondence, notes, schedules, and supplements are contained in Subseries A. Meetings/Conferences of Series III. The Coalition participated in a significant number of meetings, including those sponsored by state and federal governments: Citizen advisory meeting (a.k.a. pig, public, or technical meeting); NRC’s Advisory Committee on Nuclear Waste meeting; New York Low-Level Waste Management Siting Committee meeting (a.k.a. Siting meeting); NYSERDA’s board and roundtable meetings; and West Valley Program Committee meeting of the New York State Attorney General’s Office (which is to assist citizens’ and groups’ interactions and discussions during federal and state-sponsored meetings). Sometimes, state and federal-sponsored meetings were combined to meet their purposes. The Coalition’s own meetings are steering committee (with Don’t Waste New York, a.k.a executive advisory meeting), general and public, program committee, and health committee. Ray Vaughan’s meeting files [RV] are organized by year, while Joanne Hameister [JH], and Carol Mongerson’s [CM] are by meeting names.

Subseries B. Manuscripts of Series III documents the difficulties of challenging the federal and state government, but also shows the Coalition’s efforts/strategies to learn about, communicate on, and intervene in the issues of the WVNW site. Many drafts of correspondence, notes, and writings, along with comments on government reports after FOIA requests regarding regulations and policies, are documented. If FOIA-requested items are separated, archivist notes on the folders or items ([ ]) show the separated items’ locations. As indicated above, even unmarked FOIA-requested items (those without Coalition annotations) are housed in Subseries C. Correspondence of Series III.

There are differences between three subseries of Series III: Publications, Collected Research, and Library. Subseries D. Coalition’s Publications is either co-produced publications or Coalition-produced materials such as brochures, editorials, flyers, and newsletters. Subseries I. Collected Research includes scientific data, articles, correspondence, and reports that the Coalition collected for their studies, mainly in the areas of other nuclear sites and radiation and health. Subseries J. Library consists mainly of articles and books that the Coalition acquired. Topics within the Library and Collected Research are listed in a technical note section in this finding aid. Depending on the nature of the records, other collected materials not included in the three subseries are either in Subseries A. Manuscripts or Subseries K. Subject Files; see the details on folders in each subseries. Subject lists of the Subject Files are categorized by Dr. Michael Wilson, please refer to the list below.

Records of Coalition-participated campaigns, “Dig It Up,” “Don’t Waste New York,” and “No More” are so complicated, and hard to identify or assign as particular folder items,
that it is very difficult to document activities in those areas due to involvement of a broad network of groups, mixed products from local and national levels of the Coalition’s interests, and different organizations’ activities regarding legal, legislative, executive (federal and state regulations and environmental review procedures), health, environmental, and technical matters in different filing organization systems by each contributor. The archivist suggests starting research on these campaigns by first finding items in correspondence, flyers, and meeting minutes at Subseries H. Campaign/Outreach, and then following a particular campaign out into other folders (such as Series III/Subseries F. Legislative Activities, and Series IV: Related Organizations). The archivist note, [RV: DWNY], indicates Raymond Vaughan’s item from Don’t Waste New York.

The remaining Subseries in Series III are E. Financial/Membership, F. Legislative Activities, G. Legal Activities, L. Clippings, M. Media, and N. Memorabilia. See below for more detailed scopes and contents for these Subseries.

Some legal documents and health reports in Series III have restrictions. They cannot be released without consulting the original creators (usually an attorney) or redaction. Please consult the item level description for archivist notes ([closed, restricted, or redacted]), and consult the archivist for further details.

Series IV: Related Organizations mainly contains various non-government organizations’ organically-produced items (such as announcements, brochures, and newsletters) sent to the Coalition for the Coalition’s information or use. The information sources that the Coalition collected or used for their purposes are housed in Subseries A. Meetings/Conferences of this series, as well as Subseries B. Manuscripts of Series III. Original correspondence and manuscripts from Don’t Waste New York, League of Women Voters, and Springville Radioactive Study Group are often separated out between Series III and IV because Hameister, Mongerson, and Vaughan are often members of these organizations, so that a distinction needs to be made between the Coalition’s work and the work of these organizations that worked closely with the Coalition. Please refer to archivist notes (i.e. [RV: DWNY]) for original sources/housing.

Subject lists of Subseries K. Subject Files on Series III are categorized by Dr. Michael Wilson. Six subjects (Anecdotal [Personal], Geology, Hydrology and Atmosphere, Policy or Regulation, Site Management, Waste Characterizations) are the main headings; the subsections of those subjects fall into more specific categories. Inventory List:
Series I: Government Documents

Scope and Content: Includes government publications and reports (including
memoranda and newsletters) and professional research contractors’ reports prepared for
governments that were sent to the Coalition or received by the Coalition during meetings
that do not contain any annotations by Coalition members. Some documents were
separated from attached correspondence, or original housing—see the folder’s archivist
notes ([ ]) for further details.
